

## Emir Ata Yalcin

Product Manager | Gaming

## About Me

Game-obsessed Software Engineering graduate with 3 years of QA experience across fintech, telecom and SaaS. Now fully pivoting to Game Product Management. I built Lance, an AI-powered PM tool for gaming, from scratch to prove I can think like a PM. I design game systems (currently building a casual mobile game in Unity), write GDDs and ship products end-to-end. I understand what breaks a game before players do and I know how to fix it.

## Projects

### Lance: AI Gaming PM Tool

[game-lens-eight.vercel.app](https://game-lens-eight.vercel.app)

Built solo with Next.js, Supabase and Claude AI. Features GDD generation, competitor mapping, KPI tracking, monetization analysis and AI-driven game insights. Designed the full product from problem discovery to deployment.

### Merge Kingdom: Casual Mobile Game (WIP)

Built from scratch in Unity. Merge 2 + village management + boss battle loop for mobile. Designed and implemented 15+ systems including board/grid, merge logic, portal crafting, economy, save/load and order management. Wrote the full GDD covering 4 development phases.

### Tuty: Mobile App

[eaylcn.com](https://eaylcn.com)

Sole developer, product owner, QA lead and UX designer. Shipped a mobile makeup inventory app end-to-end, making real trade-offs across design, development and quality.

## Experience

### QA Engineer

**ERIKLABS**

07.10.2024 – 06.10.2025

Provided QA consultancy at ATP for the Tradesoft project (mobile stock trading application).

Designed and automated regression and functional tests using Cucumber (BDD) with Java.

Performed API testing with RestAssured, Karate and Postman.

Integrated automated tests into the CI/CD pipeline.

Later contributed as a QA Engineer in a web project, supporting manual test processes and ensuring product quality.

### Associate QA Engineer

**BLUECLOUD**

06.11.2023 – 27.09.2024

Embedded in an agile team; actively shaped sprint priorities by surfacing quality risks early in the planning cycle.

Owned regression and UAT testing for the InXpress project; ensured new features met acceptance criteria before release.

Bridged communication between developers and stakeholders on defect severity and product impact.

### QA Automation Engineer Trainee

**FEEDBACKFRUITS**

20.02.2023 – 18.08.2023

Specialized in frontend UI acceptance testing. Evaluated user-facing behavior against product requirements.

Built expertise in Ember.js-based test flows; contributed to test coverage for a SaaS EdTech platform.

### QA Automation Engineer Intern

**IBTECH**

16.05.2022 – 16.11.2022

Set up test automation projects; gained hands-on experience with Selenium, Appium and Robot Framework.

## Education

BSc Software Engineering

2019 - 2023

*Bahcesehir University*

- Specialized in Java programming; developed small-scale game projects as part of coursework.
- Capstone: Remote-controlled solar-powered garden lamp mobile app.
- Academic research: Smart Home Systems for the Visually Impaired; Autonomous Drones in Smart Agriculture.

## Certificates

ISTQB® Certified Tester – Foundation Level

English Proficiency Certificate - CEFR B2

## Skills

- Product Strategy
- Roadmap Planning
- User Research
- Game Economy Design
- KPI & Analytics
- AI-Powered Tools
- Competitive Analysis
- GDD Writing
- Agile / Scrum
- QA & Testing (3 yrs)
- Unreal Engine 5
- Next.js & Supabase
